## **GNT SERIES** GNT 725 & 810

#### 231/400V - 50Hz & 277/480V - 60Hz

#### **Features and Benefits**

- Half Century Experience in Generator Manufacturing
- Diesel Engines with Advanced Technology and Quality
- Alternators with Advanced Technology and Quality
- Control Panel Suitable for Flexible ApplicationHigh Quality and Reliable Technology
- Thigh Quality and Reliable Technolog
- Patented Compact Designed and Soundproof Canopy
- Suitable for Heavy-DutyDurability
- Wide Range of Affordable Spare Parts

- Low Noise Level
- Low Exhaust Emission
- Low Operating Cost
- Low Fuel Consumption
- Low Oil Consumption
- Tropical 50°C Radiator
- Fuel Filter with Water and Particle Separator
- First Class Product Support
- Global Technical Service and Maintenance Support

#### **Diesel Engine Main Technical Parameters**

|--|

General		
Number of Cylinders		8
Configuration		V - Type
Aspiration		Turbocharged & Intercooled
Combustion System		Direct Injection
Compression Ratio		15,5:1
Bore	mm	128
Stroke	mm	155
Displacement	L	15,948
Governing Type		Electronic
Governing Class		G3
Rotation		Counterclockwise
Firing Order		1-5-7-2-6-3-4-8
Emission		Tier II
Moments of Rotation Inertia		
Engine	kg • m²	4,54
Flywheel	kg • m²	2,1
Performance Rating		
Speed Droop	%	≤0,5
Steady State Speed Band	%	≤0.5
Test Conditions		
Ambient Temperature	%	25
Atmospheric Pressure	kPa	100
Relative Humidity	RH (%)	30
Max. Operating Intake Resistance	kPa	<5
Exhaust Backpressure Limit	kPa	<10
Fuel Temperature (Fuel Inlet Pump)	°C	38 ± 2
Filters		
Air Filter		Dry Type, Replaceable
Fuel Filter		With Water Seperator
Oil Filter		Element Type, Particulate Trap
Flywhell Housing and Flex Coupling		
Flywheel Housing	SAE (J620)	1
Flex Coupling Disc	Inch (")	14
Overall Dimensions		
Length *	mm	1745
Width	mm	1380
Height	mm	1400
Dry Weight	Kg	1400
* From front end of radiator to rear end of air filter

# **GNT 725 & 810**

#### 231/400V - 50Hz & 277/480V - 60Hz

#### **Generator Dimensions**

#### **Generator Technical Drawings**

#### **Diesel Engine and Genset Rating Classifications**

The below ratings represent the engine performance capabilities to conditions specified in TS ISO 8528/1, 8528-4, 8528-5, 8528-8, BS5000, ISO 3046/1:1986, NEMA MG-1.22.1, BS 5514/1.

#### STAND BY POWER RATING (ESP):

ESP is applicable for supplying emergency power for the duration of the utility power outage. No overload capability is available for this rating. Under no condition is an engine allowed to operate in parallel with the public utility at the Stand By Power rating. This rating should be applied where reliable utility power is available. A Stand By rated engine should be sized for a maximum of an 70% average load factor and 200 hours of operation per year. This includes less than 25 hours per year at the Stand By Power rating. Stand By ratings should never be applied except in true emergency power outages. Negotiated power outages contracted with a utility company are not considered an emergency.

#### PRIME POWER RATING (PRP):

Applicable for supplying electric power in lieu of commercially purchased power. Prime Power applications must be in the form of one of the following two categories

#### UNLIMITED TIME RUNNING PRIME POWER (ULTP):

PRP (Prime Power) is available for an unlimited number of hours per year in a variable load application. Variable load should not exceed a 70% average of the Prime Power rating during any operating period of 250 hours. The total operating time at 100% Prime Power shall not exceed 50 hours per year. A 10% overload capability is available for a period of 1 hour within a 12-hour period of operation. Total operating time at the 10% overload power shall not exceed 25 hours per year. LIMITED TIME RUNNING PRIME POWER (LTP):

LTP (Limited Time Prime Power) is available for a limited number of hours in a nonvariable load application. It is intended for use in situations where power outages are contracted, such as in utility power curtailment. Engines may be operated in parallel to the public utility up to 750 hours per year at power levels never to exceed the Prime Power rating. The customer should be aware, however, that the life of any engine will be reduced by this constant high load operation. Any operation exceeding 750 hours per year at the Prime Power rating should use the Continuous Power rating.

#### CONTINUOUS POWER RATING (COP):

COP is the power that the engine can continue to use under the prescribed speed and the specified environment condition in the normal maintenance period stipulated in the manufacturing plant. And Continuous Power is applicable for supplying utility power at a constant 100% load for an unlimited number of hours per year. No overload capability is available for this rating.

#### PAY ATTENTION to the points below in picking and using the generator

\* Generators can work on Continuous Power at 70% of Prime power value if only all maintenances are done on time with original spare parts and high quality oils that manufacturer advice.

- \* Generators should not operate below 50% of Prime Power value. In such a case, the engine will burn excessive oil and eventually have irreparable damage
- \* If your need is 1000 kVA or above, you should prefer Synchronic Systems with 2-3 generators with failure back up and simultaneous aging

\* These points will provide advantage for you with purchasing and operating the generator.

#### **INTER** Diesel Engine Power Ratings – Fuel Consumption – Oil Recommendation and Oil Grades

INTER Diesel Engine Power Ratings								
Engine Model E896TDI		E896TDI		E896TDI Engine Family ID25 Engine		Engine Series	P	'
		Typical Generator Output (Net)		Engine Power				
Speed	Type of Operation	Typical Generator Output (Net)		G	ross	Net		
rpm		kVA	kWe	kWm	Нр	kWm	Нр	
1500	Stand By (Maximum)	725,0	580,0	634,0	851,0	611,0	820,1	
1500	Prime	659,0	527,0	578,0	775,8	555,0	745,0	
1800	Stand By (Maximum)	812,0	650,0	710,0	953,0	684,0	918,1	
	Prime	736,0	589,0	646,0	867,1	620,0	832,2	

ator powers are typical and are based on an average alternator efficiency and a power factor (Cos. Q) of 0.8

Fuel Consumption								
Descent of Drime neuron	1500	) rpm	1800 rpm					
Percent of Prime power	g/kWh	l/hr	g/kWh	l/hr				
110%	200	144,5	200,0	161,9				
100%	196	128,7	196,0	143,9				
75%	196	96,6	196,0	107,9				
50%	207	68,0	207,0	76,0				

Fuel specification: BS 2869: Part 2 1998 Class A2 or (DIN EN 590) ASTM D975 D2 Diesel. The fuel must be clean and without water)

#### Why You Should Buy GENPOWER?

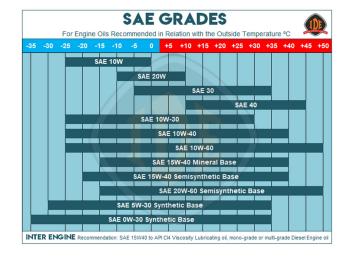

#### Only because it is the biggest generator factory in the World? NO!

- \* It is one of the most trustworthy and distinguished generator manufacturers in the world with its almost half century experience in the field.
- \* It has interiorized the strategy of unconditional customer satisfaction and has been working with this work ethic together with its whole crew.
- \* Customers and end users get their moneys' worth and more with every penny.
- \* It has become a big family with customers and users who receive durable, long-lasting and high quality products.
- \* It has been appreciated many times by customers and suppliers about the investments that have been made for quality enhancement.
- \* Both its suppliers and customers always know GENPOWER is and will always be there for them. GENPOWER on their side in bad and good days.
- \* In order not to harm brand reputation and recognition, each day, they work harder than the day before.
- \* It continues its business only with the suppliers, customers, dealers and technical services that also embrace the same mind set and work ethics.
- \* It proves its loyalty for quality and customer satisfaction with its mottos "Your power is the core of our business" and "nothing will be left unfinished" \* The specifications and/or modifications you can receive with extra costs by other manufacturers are included in standard production in GENPOWER
- \* When you purchase GENPOWER products, you are not a customer or a buyer but GENPOWER perceives and accepts you as a valuable member of its continuously growing family.

#### These are why you should buy from **GENPOWER**...
